

iOS7 Update Instructions

Backup an iPad using a Computer -

1. Before connecting your iPad to your computer to back it up, make sure you have the latest version of iTunes on your machine (either PC or Mac) and that your iPad is fully-charged

2. Make sure you update all the apps on your iPad prior to backing up.

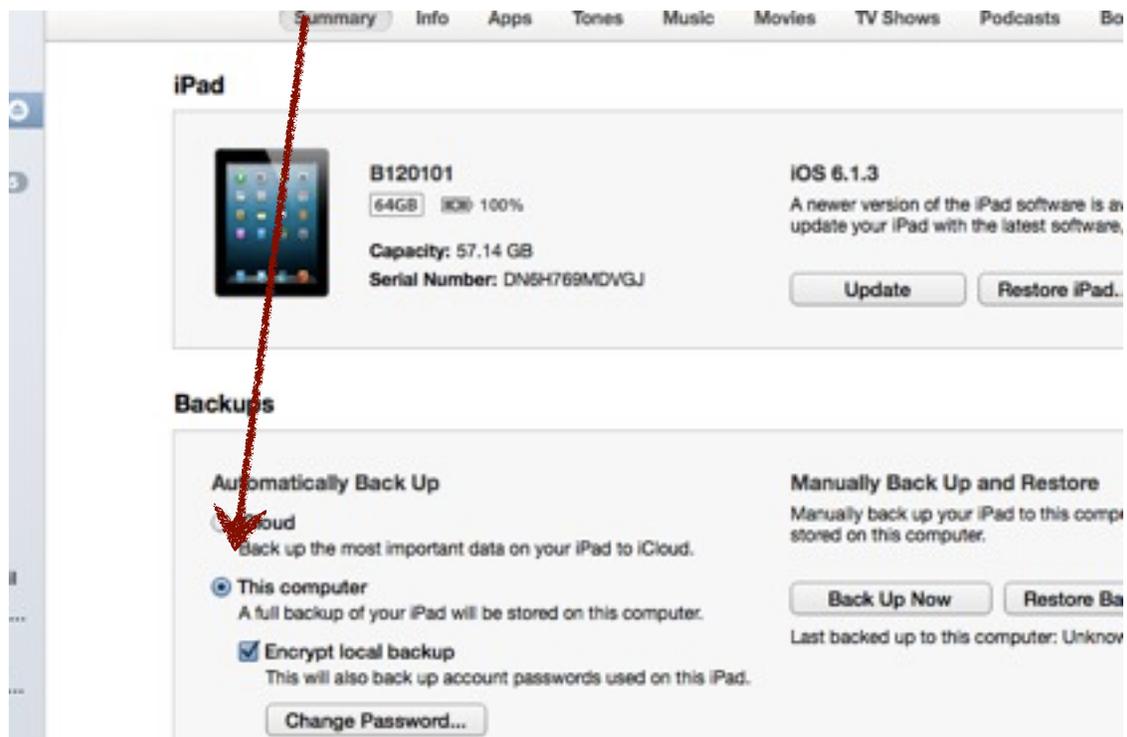

In the App store under updates you can click on your "Update All" button. Depending on the number of updates this could take a while.

3. You may have to agree to new iTunes terms and services prior to completing all your updates. You'll also likely have to enter your iTunes password.

4. Once you've updated all the apps, plug your iPad into your computer and create a backup.

5. Go into iTunes and click on your iPad in the left menu. Make sure "This computer" is checked in the Backups section and check the Encrypt local backup box. (this will require a password that you create - not the same as iTunes).

iOS7 Update Instructions

6. Click on “Back up Now” button.
7. Depending on how much information you have on your iPad this could take a while.

8. When you are finished, go into your iPad settings -> General -> Software Updates

9. Click on Install Now. You'll have to accept the terms and agreements of iTunes once again then wait as the iPad goes through the update process. Do NOT turn the iPad off or unplug at all during this process.
10. When the iPad comes back on, you'll have to go through the start-up steps like you did when you first got your iPad (choosing a Wifi network, logging in with your Apple ID, turning on Find my iPad, etc.) Click through those steps and your iPad will be ready go with iOS7!
